Error solution "400 get key" when integrating Google Workspace into IMTLazarus

Prior to the import step of Google Workspace devices and groups, we need to prepare the application access to our data.

First we connect in **admin.google.com** with an administrator account..

Access to the **Security** section

Once inside security, we go down to **API permissions**

. . .

Once in API Permissions, click on MANAGE THIRD PARTY APPLICATION ACCESS

We click on Add Application > Application Name OAuth O Customer ID

We add the **Application ID**

199426366087-drj8jdrq2misdmrflql2v0nhdam1pbpu.apps.googleusercontent.com

Click **SEARCH** and it appears to us to select **IMTLazarus Google Workspace** finally we click on **ADD**

After these steps, we already have the application allowed to carry out the integration with Google Workspace the authorization is instantaneous, without having to wait 24h as in other areas of the Google administration console.
