

TECHNICAL REQUIREMENTS

These requirements are necessary regardless of the technology used in the CLIENT/COLLEGE:

- For the correct functioning of IMTLAZARUS we need the Wifi infrastructure of the center to work properly and without microcorters.
- Access through at least the ports: 53 UDP, 9999 UDP y 443 TCP to the assigned server address ([https://\[id_server_college\].imtlazarus.com](https://[id_server_college].imtlazarus.com)).
- That there is no firewall that cuts the connection to the IP of the server, if so add exception rule.

Technical specifications for Chromebook/Google Workspace devices:

- A link to the Google Workspace is required to be successfully activated.
- IMTLazarus extension loaded only in organizational units / licensed groups.

Technical specifications for Android/Samsung devices:

- The device version has to be Android 6.0 or higher (complete security only on Samsung devices with Knox technology).
- The required data are: the email and the serial number of the corresponding device.

Technical specifications for Windows/Intune devices:

- The device version has to be Windows 8 or higher.
- The necessary data is: the email and the serial number of the device exactly match the actual used, otherwise it would not be possible to deploy the system through Intune.
- Devices cannot have system administrator permissions.
- We can only have Windows Antivirus, no other.
- The browsers installed have to be only: Google Chrome and MS Edge Chromium.

Technical specifications for IOS devices:

- The device version has to be IOS 10 or higher.
- Devices must be monitored (optionally, within DEP).
- The necessary data are: the email and the serial number of the device exactly match the one registered in the MDM for proper recognition in the security application.
